GILEAD

Creating Possible

Gilead has pursued and achieved breakthroughs in medicine for more than three decades, with the goal of creating a better, healthier world for all people. Through our ongoing bold and transformative science, we're driving innovations that have the potential to become the next generation of life-changing medicines.

Gilead Sciences staff will be at UBC on August 16, 2022 to present our exciting research describing the process development of HIV drug candidate Rovafovir Etalafenamide.

We will also host a pizza lunch and information session to answer questions about careers in the pharmaceutical industry. If you are interested in discussing your research and career path individually with our staff, contact andrew.martins@gilead.com by August 12, 2022 to reserve a spot.

For more information about Gilead Sciences and our worldwide operations, please visit www.gilead.com.

Gilead On-Campus Visit @ UBC

August 16, 2022

Gilead Representatives

Dr. Andrew Stevens – Senior Research Scientist II, Process Development

Dr. Andrew Martins – Senior Research Scientist I, Process Development

Proposed Itinerary

- ◆ Morning: Arrive on Campus and meet with Faculty.
- ◆ Mid-morning: Research Presentation by Dr. Andrew Martins; “Synthetic and Process Strategies for the Successful Scale-Up of Rovafovir Etalafenamide” (Lecture Hall required).
- ◆ Lunchtime: Pizza Lunch/Information Session hosted by Gilead (room required).
- ◆ Afternoon: Meet with Students for 1:1/mock interviews (room required). Depending on number of student interviews, additional meetings with faculty may be possible.
